You need to perform operations on the corresponding square cells only when there are PV modules.

If PV modules with optimizers are installed, remove labels from the optimizers, attach them to the corresponding square cells, and then write an alias (you are advised to use the string number and position as the alias).

Remove the right-side label on the front of an optimizer and attach it to the physical layout template.

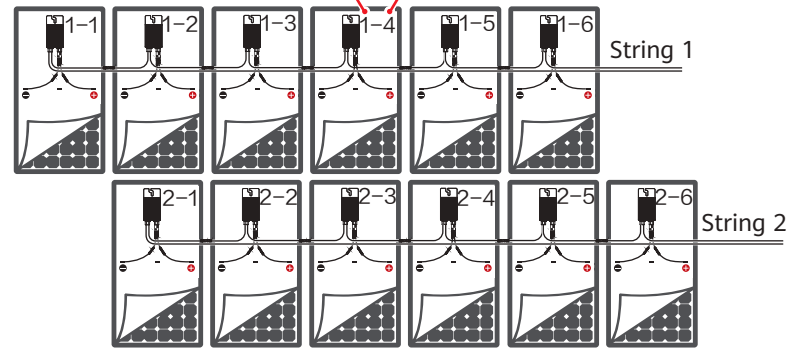

Examples:

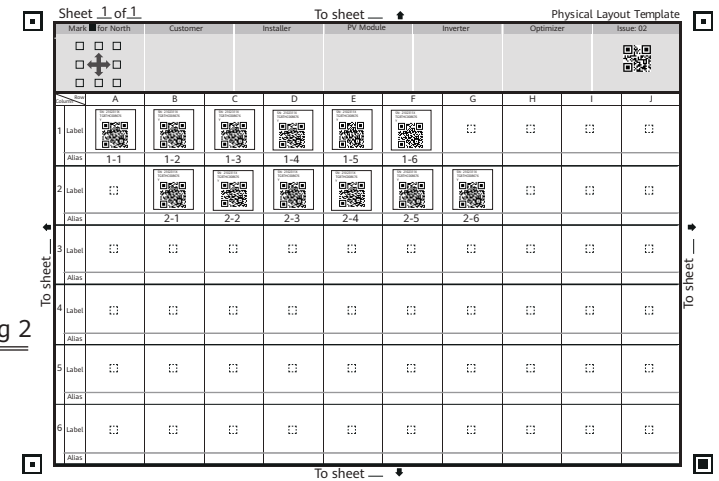

Example 1 (single drawing):

Installation positions of PV modules and optimizers

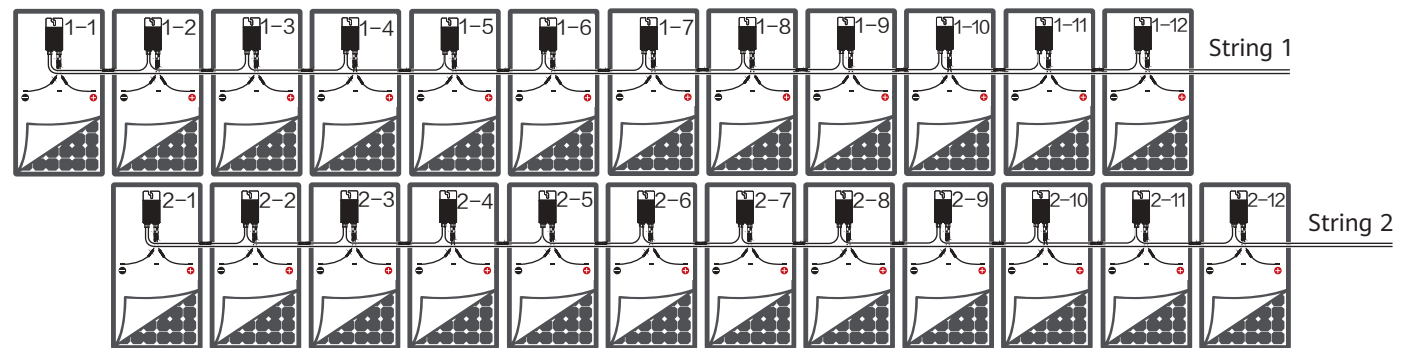

String number — Position

The following shows the labels on the physical layout drawing.

Example 2 (multiple drawings): Installation positions of PV modules and optimizers

The following shows the labels on the physical layout drawing.
